Shortest 921, longest 1799. The floor is 900 and the ceiling is 1,800, both enforced by `audit.py`. The target is 1,350, which is ten minutes at 135 words a minute.

What has been checked, and by what

CHECK	TOOL	STATE
declared episode count matches the blocks	<code>audit.py</code> [1]	clean
episode numbers contiguous	<code>audit.py</code> [2]	clean
every cross-reference resolves	<code>audit.py</code> [3]	clean
all six register rules per episode	<code>audit.py</code> [4]	clean
length inside 900-1,800	<code>audit.py</code> [5]	clean
bolded terms are in the glossary	<code>audit.py</code> [6]	clean
every planted number names its detonation	<code>audit.py</code> [7]	clean
numbers agree across seasons	<code>coherence.py</code>	clean
forward promises owed to unwritten seasons	<code>coherence.py</code>	tracked

A cross-reference resolving is not the same as it being right. `audit.py` proves the target episode exists. After any renumber, check each reference against the **title** it now points at.

The six register rules

Read the flag column as six slots in this order:

SLOT	RULE
<code>collect</code>	opens by collecting the previous episode
<code>device</code>	has a device, not just prose
<code>char</code>	character anchor, for the audience
<code>clin</code>	clinical anchor, for you
<code>falsif</code>	what would count against this
<code>hand</code>	hands off by naming the next episode

+ present, - absent. **Episode 1 of a season is exempt from collecting.** Questions with no answers in the document are rule six and are enforced separately by `audit.py`.
